

Advanced Construction Materials

Takeshi MAKI

Department of Civil and Environmental Engineering

Graduate School of Science and Engineering

SAITAMA UNIVERSITY

CONTENTS

1.	General Aspects of Construction Materials	1
1.1	Importance of Construction Materials	1
1.2	Required Performance of Construction Materials	1
1.3	Types of Construction Materials	2
1.4	Engineering Properties of Construction Materials	2
2.	Properties of Concrete	3
2.1	General	3
2.2	Composition of Concrete	3
2.3	Roles of Constituent Materials of Concrete	4
2.4	Advantages and Disadvantages of Concrete	4
2.5	Usage of Concrete	4
2.6	Performance Requirements of Concrete	5
2.7	Mixing Proportion of Concrete	5
3.	Cement	7
3.1	Types of Cement	7
3.2	Cement Compounds and Chemical Analysis	8
3.3	Physical Properties of Cement	9
3.4	Hydration Reaction of Cement	10
3.5	Characteristics of Various Types of Cement	11
4.	Aggregates	15
4.1	General	15
4.2	Types of Aggregates	15
4.3	Properties of Aggregates	16
4.4	Characteristics of various types of aggregates	20
5.	Admixtures	21
5.1	Purposes of admixtures	21
5.2	Chemical admixtures	21
5.3	Mineral admixtures	25

6.	Properties of Fresh Concrete	29
6.1	Required Performance of Fresh Concrete	29
6.2	Consistency (Slump Test)	29
6.3	Segregation	29
6.4	Air in Concrete	31
6.5	Flow and Deformation of Fresh Concrete	31
6.6	Topic: Self-Compacting Concrete	36
7.	Mechanical Properties of Hardened Concrete	39
7.1	Strength	39
7.2	Elasticity and Stress-Strain Curve	42
7.3	Shrinkage	43
7.4	Creep	45
7.5	Thermal Property	46
7.6	Permeability	47
8.	Durability of Concrete	49
8.1	Durability	49
8.2	Alkali Aggregate Reaction	49
8.3	Salt Injury	50
8.4	Carbonation (Neutralization)	52
8.5	Frost Injury (Freeze-thaw action)	53
9.	Recycling of Concrete	55
9.1	Introduction	55
9.2	Recycling of Concrete	55
9.3	Concrete with recycled aggregates	56
9.4	Perfect recycled Concrete	57
	Appendix: List of Technical Terms	59

Advanced Construction Materials
