

ENVIRONMENTAL SOIL SCIENCE

Prof. Toshiko Komatsu

Master Programme

International Programme on Civil and Environmental Engineering

Graduate School of Science and Engineering
Saitama University

TABLE OF CONTENTS

CHAPTER 1 Biotic and Abiotic Characteristics of Soil..... 1

1.1 The Soil..... 1

1.1.1 Function of soils in our ecosystem 1

1.1.2 Soil as a three phase system 2

1.2 Solid Phase 3

1.2.1 Definition of Soil..... 3

1.2.2 Soil formation..... 4

1.2.3 Soil profiles 4

1.2.4 Primary particles and soil texture..... 6

1.2.4.1 Soil texture 6

1.2.4.2 The nature of sand and silt 8

1.2.4.3 The nature of clay..... 8

1.2.5 Soil structure 9

1.2.6 Cation exchange capacity 10

1.2.7 Soil pH 11

1.2.8 Organic matter..... 12

1.3 Gaseous Phase..... 14

1.3.1 Constituents of soil atmosphere 14

1.3.1.1 Availability of oxygen and soil respiration 14

1.4 Liquid Phase 15

1.4.1 Properties of water 15

1.4.2 Soil water potential..... 16

1.5 Sample Problems 19

1.6 References and Further Reading 20

CHAPTER 2 Biotic Activities in Soil and Water 21

2.1 Major Groups of Organisms 21

2.1.1 Bacteria 21

2.1.2 Mode of nutrition 22

2.1.2.1 Type of electron acceptor 22

2.1.3 Fungi 25

2.2 Soil Factors Affecting the Growth and Activity of Soil Microbes..... 26

2.2.1 Biotic Stress..... 26

2.2.2 Abiotic stress 26

2.2.2.1 Light 26

2.2.2.2 Soil moisture 26

2.2.2.3 Soil temperature 27

2.2.2.4 Soil pH..... 27

2.2.2.5	Soil texture	27
2.2.2.6	Soil carbon and nitrogen.....	27
2.2.2.7	Soil redox potential	27
CHAPTER 3 <i>Soil-Water Retention and Water Movement in Soil</i>.....		29
3.1 Water in Soil and Groundwater.....		29
3.1.1	Water in soil	29
3.1.2	Soil-water Potential	30
3.1.2.1	Capillary rise	30
3.1.3	Measurement of soil water	34
3.1.4	Relationship between soil-water potential and soil-water content	36
3.2 Movement of Water in Soil and Groundwater		39
3.2.1	Saturated flow.....	39
3.2.2	Unsaturated flow	41
3.2.3	Transient flow.....	43
3.3 References and Further Reading		45
CHAPTER 4 <i>Physical Processes Affecting Contaminant Fate and Transport in Soil and Groundwater</i> 47		
4.1 Introduction		47
4.2 Mechanisms of Chemical Transport.....		47
4.2.1	Convective flux	47
4.2.2	Diffusive flux	48
4.2.3	Dispersive flux	49
4.2.4	Total solute flux.....	50
4.2.5	The continuity equation.....	50
4.2.6	The Convection-Dispersion Equation (CDE).....	50
4.3 Movement through One-Dimensional Columns		51
4.3.1	Breakthrough curves.....	51
4.3.2	Reactive solutes	53
4.4 References and Further Reading		54
CHAPTER 5 <i>Chemical Processes Affecting Contaminants Fate and Transport in Soil and Groundwater</i> 55		
5.1 Soil Phases		55
5.2 Solubility and Volatility		56
5.2.1	Solubility of inorganic pollutants	56
5.2.2	Solubility of organic pollutants	56
5.2.3	Evaporation of organic pollutants	57
5.2.4	Volatilization of organic pollutants	57
5.3 Sorption (Retention) of Pollutants		58

5.3.1	Sorption mechanisms for inorganic pollutants	58
5.3.2	Sorption mechanisms for organic pollutants	61
5.3.3	Sorption Isotherms	61
5.3.3.1	Linear sorption isotherm	62
5.3.3.2	Langmuir sorption isotherm	62
5.3.3.3	Freundlich sorption isotherm.....	63
5.4	Transport of Sorbing Pollutants	64
5.5	References and Further Reading	66
CHAPTER 6	<i>Polluted Soil Remediation.....</i>	67
6.1	Pollutants in Soil.....	67
6.2	Risk Assessment for Pollutants	68
6.3	Remediation Technologies.....	68
6.3.1	Introduction	68
6.3.2	Ex-situ methods.....	72
6.3.3	In-situ methods.....	73
6.3.3.1	Pump and treat.....	73
6.3.3.2	Soil vapor extraction (SVE)	73
6.3.3.3	In-situ bioremediation	74
6.3.3.4	Phytoremediation	75
6.3.3.5	Reactive barriers.....	75
6.4	References and Further Reading	77
