

Inelastic Behavior of Materials and Fracture Mechanics

Yoshiaki OKUI¹

November 26, 2008

¹Department of Civil and Environmental Engineering, Saitama University

Contents

1	Viscoelasticity	3
1.1	Rheological models	3
1.1.1	Maxwell fluid and Kelvin solid	3
1.1.2	Step function and delta function	8
1.1.3	Laplace transforms	10
1.1.4	Kelvin chains and Maxwell solids	12
1.2	Creep in concrete	15
1.2.1	Creep coefficient	15
1.2.2	Creep prediction equation in design specifications	16
1.3	Hereditary integrals	16
1.4	Dischinger's method	19
1.5	Zienkiewicz's method	20
1.6	Micromechanism of creep	23
2	Plasticity	27
2.1	Introduction	27
2.1.1	Uniaxial behavior of metal	27
2.1.2	Outline of theory of plasticity	28
2.2	Yield criterion	28
2.2.1	Tresca criterion	30
2.2.2	Von Mises criterion	31
2.2.3	Mohr-Coulomb criterion	34
2.2.4	Drucker-Prager criterion	35
2.3	Flow rule	36
2.4	Hardening rules	37
2.4.1	Strain hardening and work hardening	37
2.4.2	Subsequent yield surface	39
2.4.3	Prandtl-Reuss equation	40
2.4.4	Prager's kinematic hardening rule	42
3	Fracture Mechanics	46
3.1	Introduction	46
3.1.1	Ductile fracture and brittle fracture	46
3.1.2	Historical background	46
3.2	Linear Elastic Fracture Mechanics	47

3.2.1	Model for crack extension in atomic level	47
3.2.2	Stress concentration caused by flaw	50
3.2.3	Energy balance by Griffith	51
3.2.4	Modified Griffith's theory	53
3.2.5	Energy release rate	55
3.2.6	Unstable crack extension and R curve	57
3.2.7	Stress Intensity Factor	61
3.2.8	Relationship between K and G	67
3.2.9	Crack-Tip Plasticity	69
3.2.10	Plastic zone shape based on classical yield criteria	75
3.3	Elasto-Plastic Fracture Mechanics	77
3.3.1	Crack Tip Opening Displacement (CTOD)	77
3.3.2	J integral	78
3.3.3	Laboratory Measurement of J	84
3.3.4	Relation between CTOD and J integral	87
3.4	Fatigue Crack Growth	88
3.4.1	Theoretical Basis	88
3.4.2	Fatigue crack growth curve	90
3.4.3	Crack closure and the fatigue threshold	91
A	Thermomechanics of elastoviscoplastic continua	96
A.1	The small-perturbation hypothesis	96
A.2	General principal of continuous-media thermomechanics	97
A.2.1	Principles of thermodynamics for continuum	97
B	Surface energy	99
C	Dislocation	100
